Hospital Information System

Aim

To develop a cloud-based Hospital Information System using Zoho Creator for managing patient details, doctor information, admissions, and treatment records efficiently through a SaaS platform.

Algorithm

1. Start the application.
2. Log in to the Zoho Creator account.
3. Create a new application named Hospital Information System.
4. Design a Patient Registration form with fields such as Patient Name, Age, Gender, Address, Phone Number, Email, Attender Name, Attender Phone, Doctor Name, Disease, Admission Date, and Status.
5. Configure the appropriate field types (Single Line, Number, Date, Dropdown, Email, Phone, etc.).
6. Create reports to display, search, edit, and delete patient records.
7. Design dashboards to show:
 - Total Patients
 - Admitted Patients
 - Discharged Patients
 - Patients Under Treatment
8. Validate mandatory fields before saving records.
9. Save the patient information to the Zoho Creator cloud database.
10. Generate reports and dashboards for easy monitoring and management.
11. End the application.

DASHBOARD:

Result

Thus, the Hospital Information System was successfully developed using Zoho Creator (SaaS). The application enables efficient management of patient registration, doctor allocation, admission details, and patient status while providing cloud-based storage, reports, and dashboards for easy access and monitoring.
