Library Book Reservation System

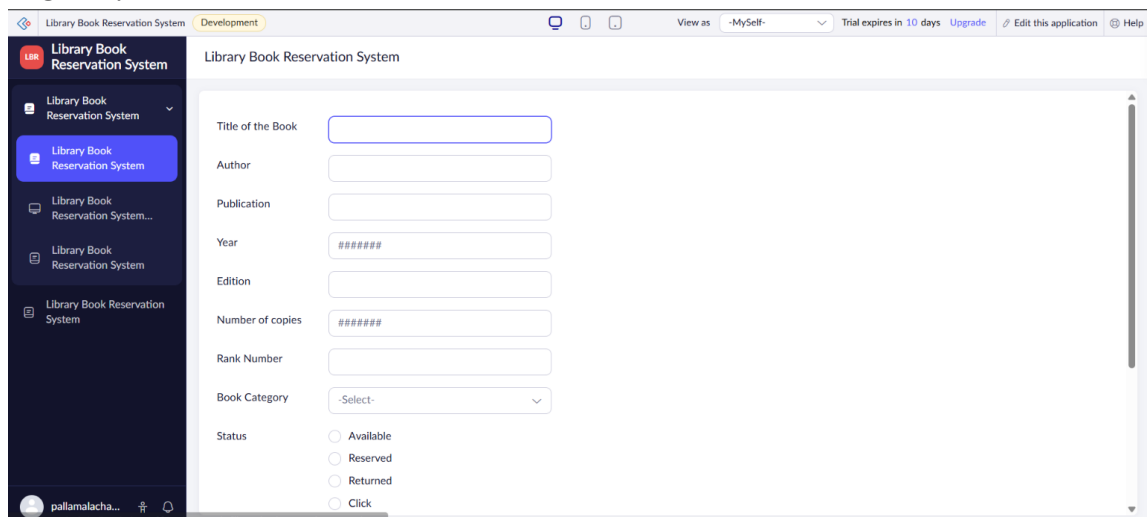

Aim

To develop a Library Book Reservation System using Zoho Creator that allows users to search for books, reserve available books, manage member details, and maintain reservation records efficiently through a cloud-based application.

Algorithm

1. Start the application.
2. Register or log in as a library member.
3. Enter member details.
4. Search for the required book.
5. Check the availability of the selected book.
6. If the book is available:
 - Select the book.
 - Click Reserve Book.
 - Store the reservation details in the database.
 - Update the book status as Reserved.
7. If the book is not available:
 - Display the message "Book Not Available".
8. Librarian can view, approve, or cancel reservations.
9. Members can view their reservation status. And End the process.

FORM:

The screenshot displays the 'Library Book Reservation System' form within the Zoho Creator interface. The form is titled 'Library Book Reservation System' and is currently in 'Development' mode. It features a sidebar with navigation links for 'Library Book Reservation System' and 'Library Book Reservation System...'. The main form area contains the following fields:

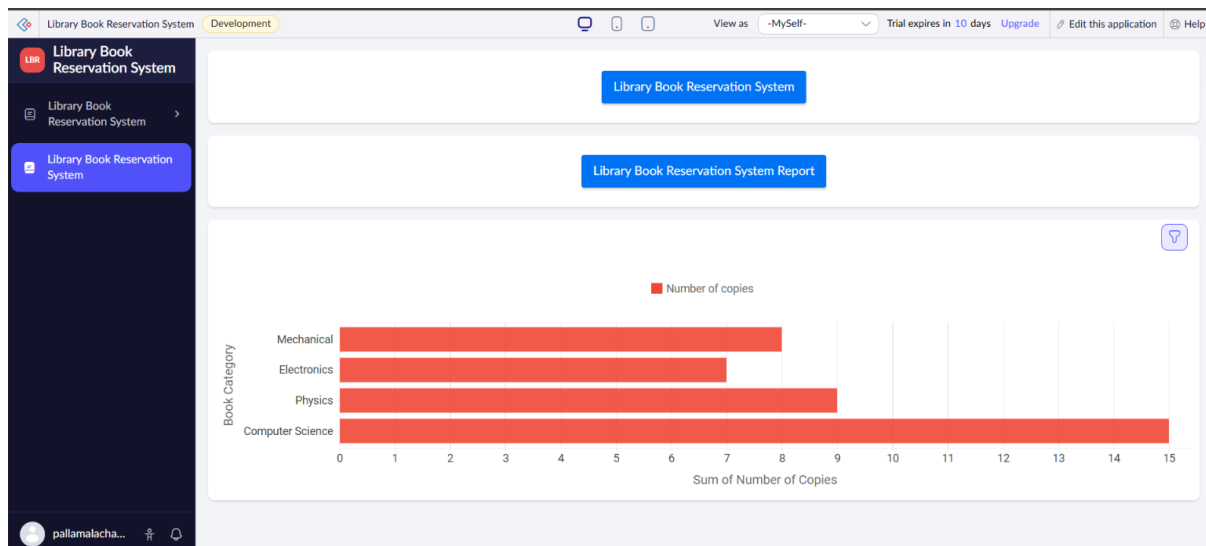

- Title of the Book (Text input)
- Author (Text input)
- Publication (Text input)
- Year (Text input with a placeholder '#####')
- Edition (Text input)
- Number of copies (Text input with a placeholder '#####')
- Rank Number (Text input)
- Book Category (Dropdown menu with '-Select-' selected)
- Status (Radio buttons for 'Available', 'Reserved', 'Returned', and 'Click')

The form is displayed on a mobile device screen, with the user's name 'pallamalacha...' visible at the bottom left of the sidebar.

Report:

Book ID	Title of the Book	Author	Publication	Year	Edition	Number of copies
5	natural language process	nikhil	arsat	2021	5th	7
4	computer vision	chandra	vinay	2023	4th	9
3	python	reema	oxford	2020	5th	5
2	DBMS	korth	pearson	2022	7th	8
1	Cloud computing	Rajkumar	mcgraw	2021	3rd	10

Dashboard:

Result

The Library Book Reservation System was successfully developed using Zoho Creator. The application enables users to search for books, reserve available books, maintain member information, and manage reservations efficiently. It provides a simple, secure, and user-friendly cloud-based solution for library book reservation and record management.
